🏠 Rennes (35000), France

AI Engineer with hands-on experience designing and deploying Generative AI platforms: agentic RAG, business applications, automated model evaluation, and observability. Comfortable across the full lifecycle from prototype to production, I am looking for a role that combines technical rigor with business impact around Generative AI.

PROFESSIONAL EXPERIENCE

AI Engineer - Rennes métropole - Rennes, France

Since Feb. 2025

Subject : Design and production deployment of a Generative AI platform: agentic RAG, business applications, automated model evaluation, and observability.

- Designed and deployed to production an agentic RAG (LLM agents with tool orchestration and memory) leveraging heterogeneous document repositories across different departments.
- Deployed Open WebUI to production as the access interface for models and assistants, including user and permission management.
- Developed and secured robust APIs to integrate the platform with existing services.
- Implemented SSO-OAuth authentication and HTTPS security to ensure compliance and production-grade security.
- Designed an application that automates document processing, centralizes knowledge base management, and now handles user access and permissions.
- Built an automated evaluation system for the retriever and generator (test sets, relevance and faithfulness metrics) to drive continuous improvement.
- Instrumented the platform with Langfuse: LLM chain tracing, performance and cost monitoring, production observability.
- Developed and deployed to production an AI-powered audio transcription application with automatic synthesis.
- Developed applications and web interfaces for various use cases.
- Led the transition from POC to production and supported business teams in experimenting with and validating prototypes.

Tools : *Agentic RAG, LLM Agents, Python, FastAPI, Speech to Text, Docker, GitLab, CI/CD, Open WebUI, Langfuse, SSO-OAuth, NLP*

Internship - Data Analysis and Processing - TA-Consulting - Paris, France

Dec. 2022

Subject : Data analysis and modeling for optimizing the deployment of SFR network antennas.

- Prepared and analyzed technical and geographic data related to network infrastructure.
- Developed Machine Learning models to predict coverage and identify areas for improvement.
- Analyzed factors influencing antenna performance.
- Created visualizations and maps to support network sizing and planning.

Tools : *Python, R, Machine Learning, Data Visualization*

EDUCATION

Master's in Applied Statistics, Data Science & AI track - Université Rennes 2 - Rennes, France

Sep. 2023 - Aug. 2025

Bachelor's in Human & Social Sciences Applied to Data - Université Clermont Auvergne - CF, France

Sep. 2021 - Aug. 2023

Bachelor's in Computer Science, Operations Research track - USTHB - Algiers, Algeria

Sep. 2017 - Aug. 2021

SKILLS

IA & GenAI : Agentic RAG, LLM Agents, NLP, Machine Learning, Deep Learning, Speech-to-Text.

LLM & Frameworks : LangGraph, LangChain, Hugging Face, Langfuse, Open WebUI.

Backend & APIs : Python, FastAPI, Flask, APIs REST.

Data : SQL, Big Data, Data Visualisation.

DevOps & Cloud : Git, GitHub/GitLab, CI/CD, Docker, GCP, RabbitMQ.

LANGUAGES

French, English, Arabic, Kabyle

STRENGTHS

Autonomy, Curiosity, Analytical mindset
